

# MODERN UI

## ZIMBRA EMAIL & COLLABORATION

### Unleash the Power of Productivity with Zimbra Modern UI

**Embrace a modern, sleek, and user-friendly email solution. Discover why Zimbra Modern UI is the ultimate choice for individuals and businesses looking to optimize their productivity.**

#### What is Modern Web App?

Zimbra is a full-featured messaging and collaboration solution that includes email, address book, calendaring, tasks, and Web document authoring.

Zimbra comes with a Modern Web App that is a new-age email application usable from virtually any device or screen size. It is secure, flexible, and scalable to meet spikes in demand and comes with a built-in rich user experience.

#### Responsive Design

By following Responsive Web Design principles, Zimbra's Modern Web Application ensures that users get a consistent experience and full functionality across all their devices. Instead of forcing users to adapt to completely different interfaces, the Modern Web App lets them engage with the same interface everywhere while it adapts to them.

#### Advanced Features

Enjoy real-time notifications, so you never miss an important message or meeting again. The drag-and-drop functionality enables you to effortlessly manage your emails, attachments, and calendar events. The powerful search capabilities make finding specific emails or contacts a quick and hassle-free process.

Several features are unique to the Modern Web App and are not available in the Classic Web App:

- Installable as a Progressive Web App
- QR Code for easier configuration of two-factor authentication
- User preference for Date and Time formats
- Unified calendar & tasks
- Special-purpose calendars, e.g. Holiday Calendar (via Zimlet)
- Basic & Advanced Filters in Settings
- Advanced Pasting from Office Documents in the composer

#### Customization and Extensibility

Like the Zimbra Web Client, Zimbra's Modern Web Application supports branding and customization of colors, fonts, logos, and external site navigation - but unlike Classic, Modern Zimlets can be supported across all devices.

Exclusive and custom features can be delivered using the new Zimlet framework.

#### Security & Privacy at its Core

Zimbra is built with security and reliability at its core, necessary to keep the information, identities, applications, and devices safe. Zimbra's dependable server infrastructure also provides the privacy and data sovereignty Zimbra customers have come to expect, and in many cases, require.
